

eCR Viewer

Improve eCR access and readability for PHAs

The eCR Viewer is an intuitive interface that helps your epidemiologists and case investigators make better sense of eCR data, faster

The challenge

In interviews with epidemiologists who review eCRs and other case data, we've heard that eCR data is often difficult to make sense of — it's like getting someone's entire medical record dropped on your desk. The eCR Viewer aims to make relevant information easier to find by displaying eCR data in a way that's more intuitive.

Our solution

The eCR Viewer is a tool for public health practitioners that aims to improve the usability of electronic case reporting data by displaying a summary of key data contained in an eCR so that staff can quickly find the information they need.

Deployment options

Integrated eCR Viewer

- Users can access the eCR Viewer directly within their surveillance system.
- Direct integration is currently supported by NBS using the existing "View eICR document" button. EpiTrax integration coming soon.

Standalone eCR Library

- Users can access the eCR Viewer as a standalone tool outside of a jurisdiction's surveillance system.
- Standalone tool provides an eCR Library homepage, allowing users to filter and sort eCR documents.

Surfaces the most relevant information

A summary is provided at the top of the eCR, so any staff member can quickly find the information they need

Combines information from both eICR and RR

Epidemiologists reviewing the eCR can understand why it was sent to their jurisdiction

Keeps data formats consistent

eCR formatting will be consistent regardless of which EHR system generated the eCR

Generates a database of parsed eCR data

Epidemiologists can easily query and use data

Costs your jurisdiction nothing to use

The eCR Viewer is 100% free

Offers flexible hosting within your jurisdiction

All cloud providers are supported
